Dear Friends, Dear Commercial Partners,

Spacek Product commenced operations in 1991, manufacturing sintered disc brake pads for a wide range of both road and off-road motorcycle model applications, utilising „Goldfren“ as our chosen product brand logo. In the following 22 years since our commencement of manufacturing operations, we have today in 2013 become one of the largest aftermarket suppliers to world markets in this product sector (M/Cycle disc brake pads).

During this period of evolution and growth in our commercial operations; as a result of continuous heavy investment in R & D, we have successfully expanded our product range of sintered brake pads to incorporate aftermarket product to service the Aeronautical, Heavy-Duty Industrial Logistics Equipment (Lifting Cranes), Automotive Motorsport, Mountain Bike, and M/Cycle Motorsport Sidecar, commercial sales sectors.

To continue to endeavour to meet our customers evolving demands in the intensely competitive and critical commercial world we all operate in, Spacek Product continues to invest heavily in product R & D to maintain development of „new generation“ products, and to maintain our position at the technological forefront of the Sintered Friction Braking Industry. By basing our manufacturing facility in the Czech Republic which is world renowned for its engineering excellence since some 100 years past, we are able to offer our customers the perfect combination of world leading technology combined with a very competitive production cost base so that the customer and the consumer can purchase the best quality product at the most competitive price – with complete confidence in the performance, durability, and reliability of the product.

We commenced production in 2000 of a complete range of aftermarket Street and Motocross Disc Brake Rotors, applicable to most Japanese and European Sport and Touring M/Cycles, Scooters, ATV M/Cycles, and Motocross models. These Rotors are available in OEM round configuration, and in several other specialised aesthetic style configurations.

One of our current priorities in our manufacturing program is to introduce graphic design elements to differentiate and protect our Goldfren branded product range from plagiarism from inferior product brands attempting to (without our authority) capitalise on our heavy investment in R & D and product promotion. It is our absolute priority to protect and to add value to our Goldfren product reputation, to support and promote our customers marketing programs in their home markets throughout the world.

Dear friends, Dear commercial partners; we thank you for your current and past support , and we are sure that you continue to value our efforts to offer you the best possible product technology and pricing that your market demands, and we are confident that you will value our Goldfren product range as a „priority and preferred“ product group in your inventory and marketing strategies.

Yours Truly, Mr. Stanislav (Stan) Spacek

Managing Director / Spacek Product

GOLDfren sintered brake pads are used as replacement for original parts on most of new motorcycles models. **They do not contain lead nor asbestos.**

Performance brake pads

High Quality
Highly eco-friendly

Installation Instructions

- Verify the correct selection of the brake pads at the dealer's in accordance with the bike type and manufacturing year of your bike.
- Replace the brake pads as soon as the braking surface thickness has dropped below 2 mm.
- Protect the brake pad surfaces against grease, oil and other chemical substances.
- Clean and degrease the brake wheels prior to installation of new brake pads.
- Replace damaged brake wheels reducing the braking effect and, at the same time, shortening the lifetime of the brake pads.
- Install the brake pads directing their braking surfaces towards the brake wheel. Having completed the installation, check correct mounting and securing of the pads.
- Entrust a specialized servicing shop with the installation of brake pads when lacking experience.
- Tested by the German Testing Institute TÜV.

Running-In New Brake Pads

The correct way of running-in newly installed brake pads is the prerequisite for their long lifetime and for a reliable braking effect of the bike brakes. If possible, do not provide your motorbike with new brake wheels during running-in new brake pads.

Cleaning of the brake wheels using abrasive paper is recommended in case of their previous use with another lining material. After the installation of the brake pads, their fitting must be free and without excessive clamping in the brake mount.

Having revved up your bike, brake several times at lower speeds to achieve a contact surface of 80 to 90 per cent of the total area of the active brake pad surface between the brake wheel and the pads. Then brake the bike several times at higher speeds and allow the brake pad lining to get cooled while driving. After this running-in procedure, the brake pads may be normally used.
